 Hyderabad, India

SUMMARY

Computer Science undergraduate with strong foundations in Python, problem solving, and software development. Experienced through internships and academic projects in building practical applications using Python, databases, and version control tools. Quick learner with strong communication and collaboration skills, eager to contribute as a Software Engineer.

EDUCATION

B.Tech , <i>CMR Institute of Technology</i> CGPA - 7.5	2022 – 2026 Hyderabad
Intermediate , <i>Resonance Jr College</i> CGPA - 8.2	2020 – 2022 Khammam
School , <i>Gorkey Public School</i> CGPA - 8.7	2020 Khammam

TECHNICAL SKILLS

- **Languages** : Python
- **AI/ML** : Machine Learning, Deep Learning, NLP, Computer Vision
- **Frameworks** : TensorFlow, PyTorch, Scikit-learn, OpenCV
- **Libraries** : Pandas, NumPy, Matplotlib
- **Databases** : MySQL
- **Web** : HTML, CSS
- **Tools** : Tableau , Power Bi , Excel , Git

PROJECTS

Air Quality Index Forecasting via Genetic Algorithm-Based Improved Extreme Learning Machine

- **Team size** : 3
- **Technologies Used** : Python with Pandas, NumPy, Scikit-learn, TensorFlow/Keras, Matplotlib, and Flask
- **Algorithms Used** : SVR (baseline), GA-KELM (optimized model), and Bi-LSTM
- **Description** : This project predicts Air Quality Index (AQI) using a hybrid machine learning approach. Genetic Algorithm optimizes the Extreme Learning Machine to improve stability and accuracy. Bidirectional LSTM captures both past and future temporal dependencies in air quality data.

Animal Detection and Collision Avoidance System Using Computer Vision

- **Team size** : 3
- **Technologies Used** : Python, OpenCV, TensorFlow, PyTorch, NumPy
- **Algorithms Used** : YOLO, SSD, Faster R-CNN, CNN, Non-Maximum Suppression (NMS)
- **Description** : This project presents a computer vision-based system for detecting animals on roads and preventing collisions. It utilizes techniques like Histogram of Oriented Gradients (HOG) for feature extraction and Boosted Cascade Classifiers for object identification to alert drivers in real-time.

Text Talker

- **Team Size** : 3
- **Technologies Used** : Python, Tkinter, pyttsx3, NLTK, TensorFlow, PyTorch
- **Algorithms used** : Text-to-Speech (TTS)
- **Description** : Text Talker is a project that converts written text into natural-sounding speech. It utilizes text-to-speech (TTS) technology to provide clear and expressive voice output, and is designed to improve accessibility for visually impaired users while enhancing human-computer interaction.

CERTIFICATES

- AI Foundation - Hexart.in
 - Python Bootcamp - Udemy
- Developer and Technology Simulation - Forage (Accenture)
- Python Essentials - Infosys Springboard

INTERNSHIPS

LLM Post-Training Intern , <i>Ethara.AI</i> Supported AI model development workflows through data preparation, annotation, and evaluation activities . Strengthened skills in data quality assessment, output validation, critical thinking, and AI model evaluation while working with large-scale datasets.	02/2026 – 05/2026
AI Intern , <i>CODE ALPHA IT PRODUCT & SERVICES</i> Developed and evaluated machine learning models on real-world datasets, improving practical understanding of data preprocessing, model training, and performance evaluation.	07/2025 – 08/2025
INTERN - PYTHON , <i>TRIAD TECHNO SERVICES</i> Gained hands-on experience in Python programming by developing automation scripts, working with data processing tasks, and contributing to web-based applications. Enhanced problem-solving, debugging, and software development skills through practical project implementation and collaborative development activities.	06/2024 – 07/2024

STRENGTHS

Problem Solving | Team Collaboration | Communication | Continues Learning
